

Sterile Filtration Devices

Vacuum-Driven and Pressure-Driven Devices

The Name You Trust for Sterile Filtration

Eliminating contaminants from your cell growth media and additives is absolutely crucial to preserving the integrity and accuracy of your cell cultures. Millipore's comprehensive line of sterile filtration tools have been specifically designed to address these needs and to serve almost any work flow you require.

SELECTION From 1 mL to 20 liters, we offer an array of both vacuum- and pressure-driven devices that incorporate Millipore brand membrane technology. And every device is specifically engineered and tested for your application needs.

EXPERTISE With over 50 years of expertise in the sterile filtration business, we set the industry standard for high performance membrane technology and application in sterile filtration.

INNOVATION We continue to raise that standard with next-generation application testing in sensitive research areas like stem cell culture and its related media and cultureware.

Get the sterile filtration performance you need every day from Millipore.

Stem Cell Tested

Millipore has initiated a rigorous testing program to ensure that our sterile filtration and cell culture devices can be used for stem cell culture. To learn more visit www.millipore.com/SCTested1.

Bench Scale Vacuum-Driven Devices

| Description | Pore Size (μm) | Membrane | Maximum Process Volume | |
|---|-----------------------------|--|------------------------|---|
| Stericup® Filter Units  STEM CELL TESTED | 0.1 | Millipore Express® PLUS* (PES), Durapore® (PVDF) | 150 mL |  |

Membrane Technology

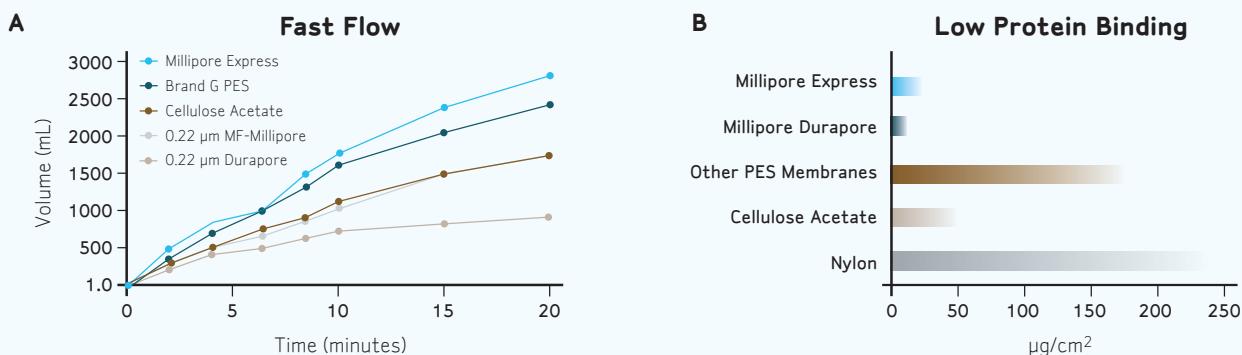

Figure A. 47 mm membrane disks with a 0.22 μm pore size were challenged with DMEM with 10% FBS.

Figure B. Membrane disks with a 0.22 μm pore size were offered a 1 mg/mL solution of ^{125}I labeled IgG. The chart shows protein binding after incubation (normalized to membrane surface area).

| | |
|--|---|
| Millipore Express & Millipore Express PLUS (PES) | Mixed Cellulose Esters (MCE) |
| ○ Fast flow and low protein binding | ○ General purpose; binds trace proteins |
| Durapore (PVDF) | Millipore LCR |
| ○ Ultra-low protein binding | ○ Broad chemical compatibility |

Stericup & Steritop Filter Units

Stericup and Steritop sterile filtration devices combine superior flow rates and throughput with low non-specific binding and a stable no-tip design.

Fast Flow, Low Binding Membranes

Membranes with low protein binding ensure that key growth factors and proteins won't be absorbed into the filter. Millipore Express PLUS membranes feature low protein binding and faster flow than other membranes. For applications that require ultra-low protein binding, use a device with Durapore PVDF membrane.

Intelligent Design

The Stericup vacuum filtration system can process and store volumes from 150 mL to 1 L. The new, no-tip/easy-grip flask design and compact profile improve stability during filtration and make Stericup filter units ideal for use in laminar flow hoods.

As an added convenience, the bottom of the receiver flask is slightly recessed, enabling capped flasks to be stacked for easy storage.

Applications

- Tissue culture media +/- additives
- Buffers
- Biological solutions

BENCH SCALE DEVICES

Stericup Filter Units

Stericup filter devices combine a filter unit with a receiver flask and cap for processing and storage.

| Description | Membrane/Application | Pore Size (µm) | Funnel Capacity (mL) | Receiver Bottle (mL) | Qty/Pk | Catalogue No. |

Feeder independent culture of human embryonic stem cells. Teneille E. Ludwig *et al.* *Nature Methods* Vol. 3 No. 8 August 2006 637-646.

** 0.10 µm pore size is designed to enhance maximum filtration of tissue culture media but it is not a guarantee of complete mycoplasma removal.

Steriflip Filter Units

For filtering 10 mL to 50 mL volumes without sample transfer steps.

Filter Up to 50 mL Directly into a Centrifuge Tube

- Attach the device to a standard 50 mL centrifuge tube containing your sample, flip it over, and apply vacuum
- Filtrate collects in the attached 50 mL tube
- Available with optional funnel accessory

| Description | Membrane | Pore Size (μm) | Qty/Pk | Catalogue No. |

Millex Syringe Filters

Millex syringe filters provide convenient sterilization of small volumes and are ideal for solutions such as antibiotics and tissue culture additives. Their unsurpassed quality and consistency of results has led to the development of many sample preparation methods that specify Millex filters.

Manufactured for Reliable Performance

Manufacturing occurs in a controlled environment using an automated process. Sterile devices are provided with a certificate of quality.

Faster Flow Rate

33 mm Millex filters have 20% more filter surface than 25 mm filters for significantly higher flow rate and throughput.

Higher Operating Pressure

With a maximum housing pressure of 150 psig (10 bar), solutions can be filtered faster.

Low Extractables, Low Binding

A variety of membranes and housings ensure chemical compatibility with a range of samples and solvents.

BENCH SCALE DEVICES

Millex Syringe Filters

Sterilized and individually packaged.

Sterivex Filter Units

Pressure-Driven Devices for Filtering up to 2 L

Sterivex filter units work with syringes, peristaltic pumps, or pressure vessels.

Sterivex units are designed to dispense into any storage container.

Sterivex-GP Filter Units

Stericap PLUS Filter Units

Universal Bottle-Top Devices for Filtering 2 to 10 L

- Fits on any vacuum-rated bottle, 20 to 67 mm in diameter
- Vented to help prevent filter air lock
- Features fast-flowing, low protein binding Millipore Express PLUS membrane
- Ideal for fast sterilization of tissue culture media, serum, buffers, or other biological solutions

| Description | Membrane | Pore Size (μm) | Qty/Pk | Catalogue No. |
|---------------------------|------------------------------|-----------------------------|--------|---------------|
| Stericap PLUS Filter Unit | Millipore Express PLUS (PES) | 0.22 | 10 | SCGPCAPRE |

Steripak Filter Units

Pump-Driven Filters for Volumes up to 20 L

Steripak filter units are designed for larger scale pressure-driven filtration of tissue culture media with or without serum. The units are single-use and come in two volume sizes. They are supplied sterile and ready to connect to a pump or pressure vessel.

| Description | Membrane | Pore Size (μm) | Filter area, cm^2 | Qty/Pk | Catalogue No. |

RECEIVER PLATES & PLATE ASSEMBLIES

Multiwell Plates

Microporous Membrane-Based Cell Culture

Millicell products promote natural cell growth and incorporate unique design features to improve flexibility in today's laboratories.

Unlike cells grown on plastic plates, membrane-supported cell cultures are able to access media from both their apical and basolateral sides, resulting in cell morphology that mimics cells grown *in vivo*.
